

Screening of sectoral policies in Latvia

Helēna Rimša

Ministry of Environmental Protection and Regional Development

Climate Change Department

Climate Change and Adaptation Policy Division

- Climate policy is horizontal policy that has to be implemented and included in many sectors of national economy;
- Many policies and measures affect climate change mitigation implicitly;
- Different policies and measures, that have positive impact on climate change mitigation, are implemented within sectoral policies;
- Low Carbon Development Strategy and National Energy and Climate plan has to be developed covering main sector of national economy.

- Review of development planning, national and sectoral regulation of energy, transport, agriculture, forest management, waste management, environmental protection, construction, tourism, education and civil protection sectors;
- Evaluation of the impact and influence of the sectoral regulation to climate policy;
- Evaluation of the overlappings, discrepancies and non-included issues of sectoral development planning policies; Review of development planning, national and sectoral regulation of energy, transport, agriculture, forest management, waste management, environmental protection, construction, tourism, education and civil protection sectors;
- Evaluation of the impact and influence of the sectoral regulation to climate policy;
- Evaluation of the overlappings, discrepancies and non-included issues of sectoral development planning policies;
- Assessment of the data availability considering the sectoral issues and the possibilities for the use of the sectoral data to climate change mitigation implementation;
- The development of the proposals for the regulation of the climate change and to improve the coordination of sectoral policies and climate change mitigation policy.

It is planned to use the results of the screening:

- In the development of Low Carbon Development Strategy and National Energy and Climate Plans;
- For the improvement of sectoral policies so the climate change mitigation policies and measures are taken into account;
- For the improvement of the national regulation of climate change mitigation;
- For coordination of the cross-sectoral policies.

Thank you for your attention!
