

Energy decarbonisation strategy for Lithuania – 80% renewables in 2050

Ministry of Energy of the Republic of Lithuania
Daumantas Kerežis

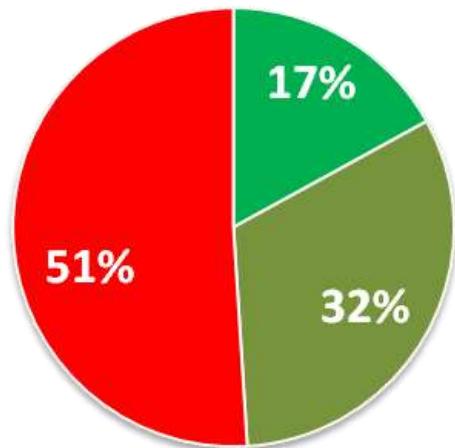

Review of Lithuanian energy sector situation (2010)

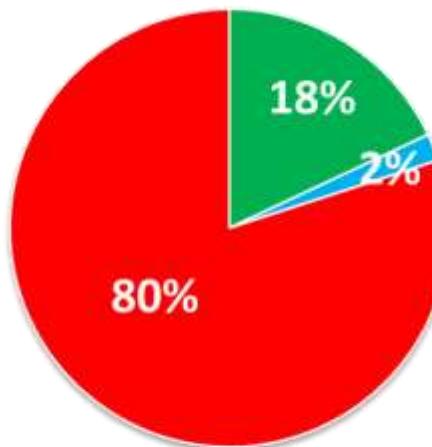

DEPARTURE POINT

Energy island / No energy market

2009

2010

Energy mix:

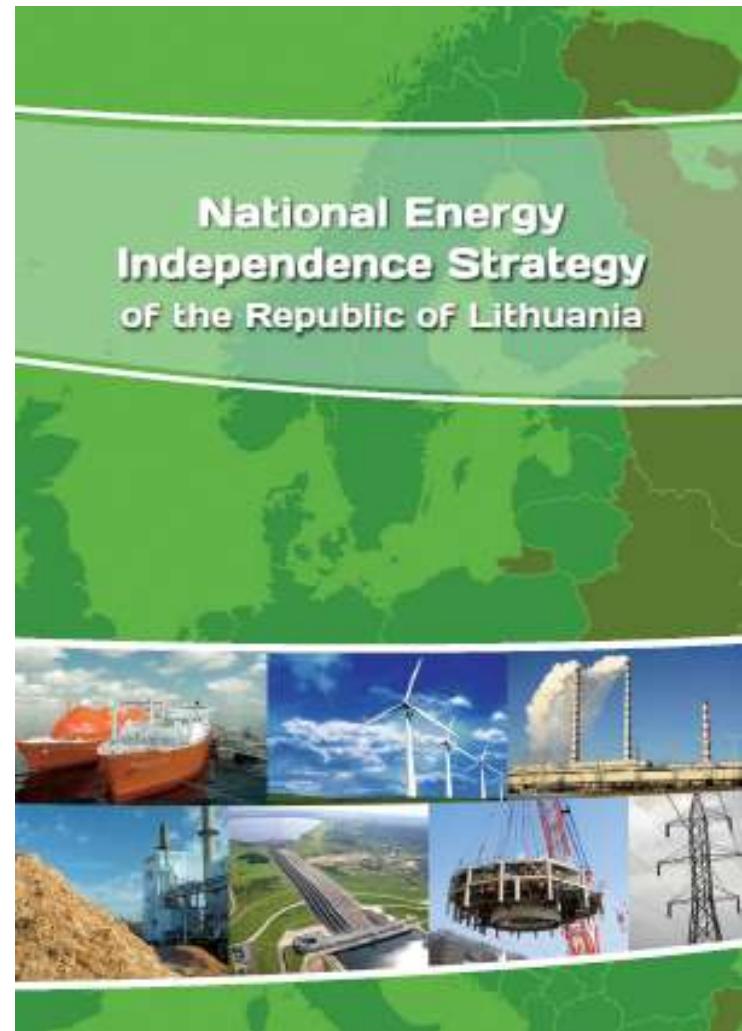

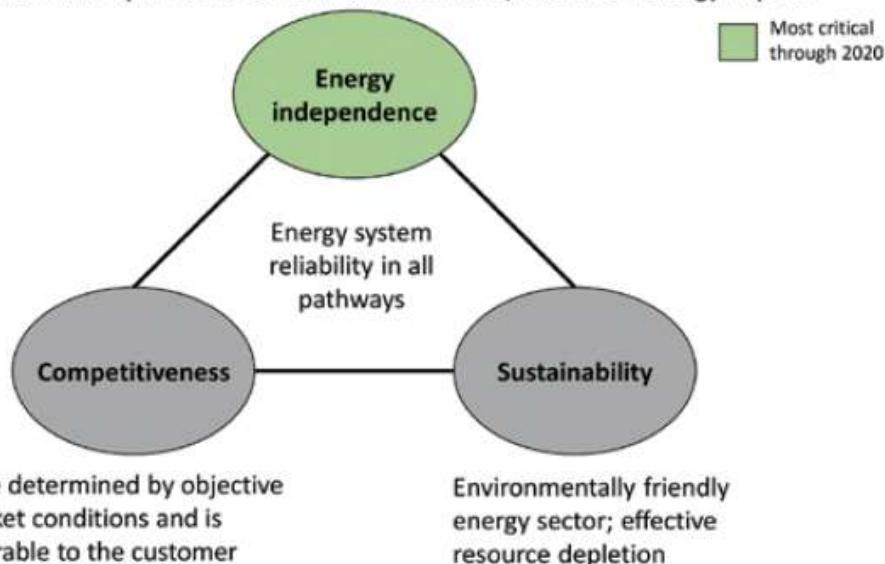

- Renewables
- Alternative import
- Import from a single supplier

National Energy Independence Strategy of Lithuania (2012)

2. The main 3 strategic principles of the Lithuanian energy sector

Integration into European energy networks; sufficient and competitive local energy generation capacities to cover internal demand; diversified energy imports

National Energy Independence Strategy of Lithuania (2017 Draft)

Strategic directions in energy

COMPETITIVENESS

ENERGY SECURITY

GREEN ENERGY

INNOVATIONS AND
BREAKTHROUGH IN ENERGY

How can we achieve the vision of 80% renewables in 2050? (1)

Development of **renewables**, with an emphasis on **wind energy** and **prosumers**

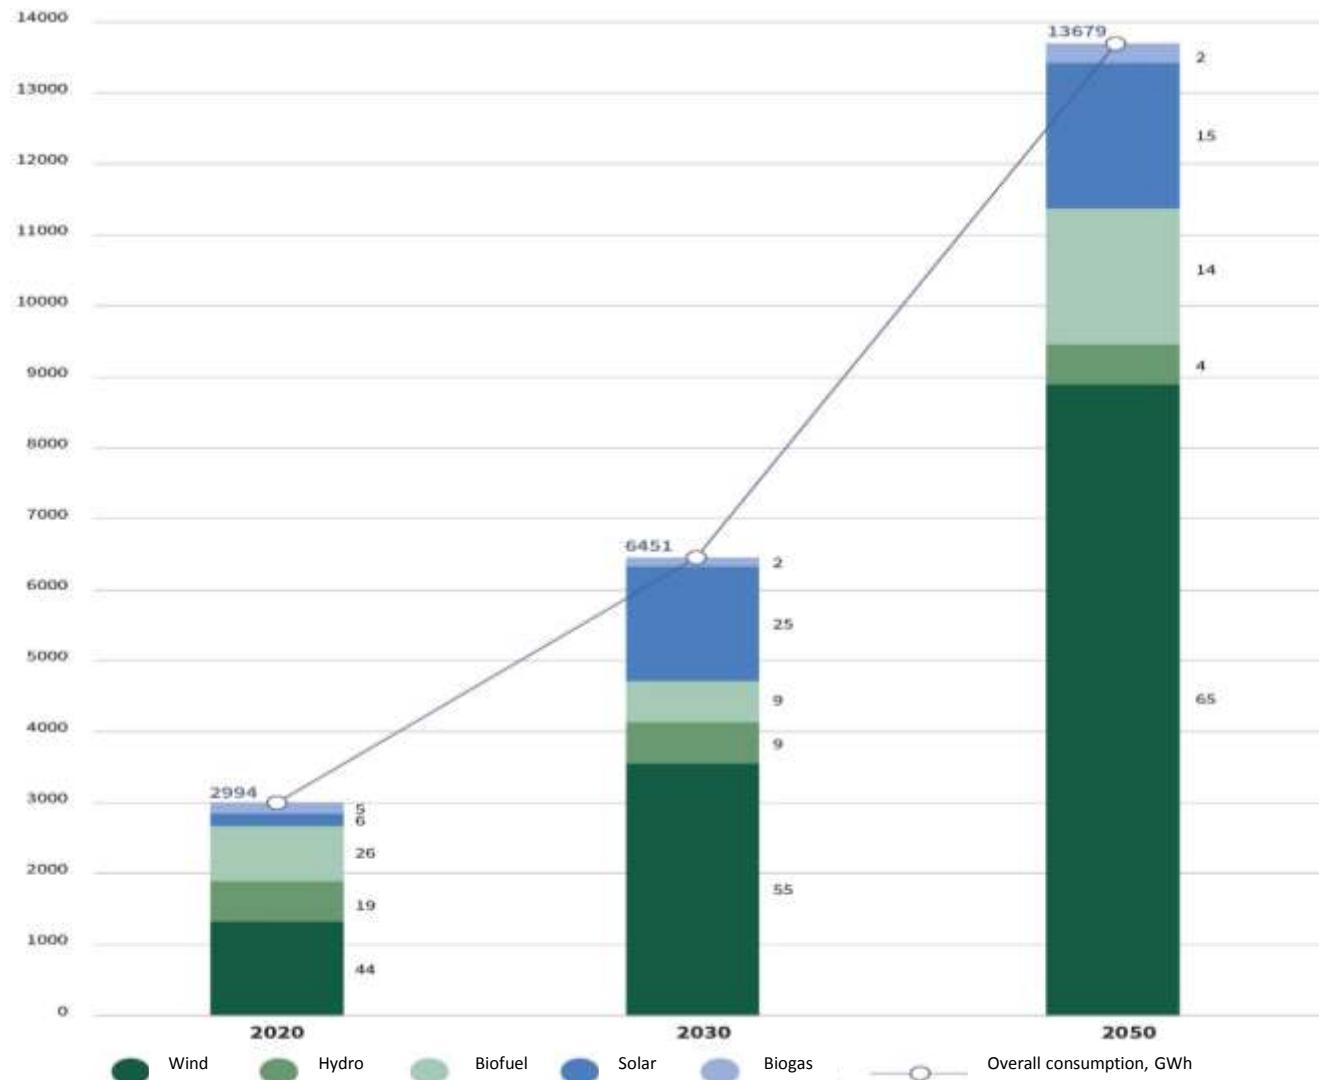

Energy **efficiency** – primary and final energy intensity around 2,4 times lower than in 2017

Transport fuel transformation

Market structure of consumed RES electricity, % and GWh (forecast)

How can we achieve the vision of 80% renewables in 2050? (2)

Solutions for energy **supply and demand** management and consumer **behavior change**

Modernization of existing **energy technologies** and creation of **new ones**

Centre of competence for renewable energy technologies

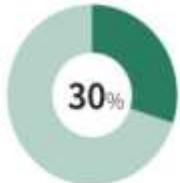

Long-term goals of the energy sector

2020 m.

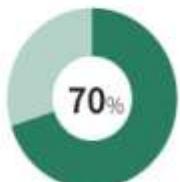

2030 m.

2050 m.

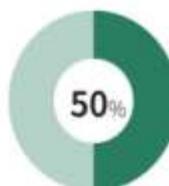

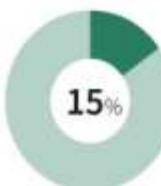

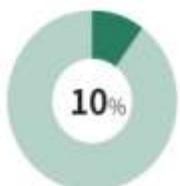

RES share in the final energy consumption

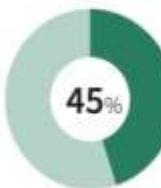

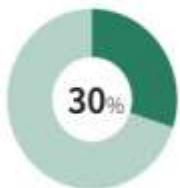

RES share in the district heat supply sector

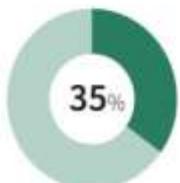

RES share in the transport sector

RES share in the electricity sector

Electricity production in Lithuania

Thank you!
